

## Guiding insurers to their digital destinations.

### Program Governance & Plan Validation

MVP helps determine the scope, requirements and functional fit COTS applications for your IT landscape.

We can develop a refined high-level estimate for planning and scheduling and ease configuration efforts to meet your unique requirements.

MVP will identify opportunities and priorities to propel you toward your goals, while ensuring alignment between your business and IT strategies.

### Business Analysis & Test Plan Design

MVP engages skilled, experienced insurance professionals to define the business requirements, develop process flow diagrams and architecture design.

We provide front-end solution design to align with implementation direction, process design, product roadmap and integration objectives.

Our business and technical analysts, solution architects, and quality and testing experts have worked with a wide range of insurance carriers, vendor technology companies and consulting firms.

### Integration & Configuration Staff Augmentation

MVP professionals have worked with a number of methodologies, including Waterfall, Agile and Hybrid. We have a proven track record on insurance projects and can ensure yours is successful.

MVP brings an understanding of the most efficient methods to architect integration, achieving flexibility and reuse of components.

### Complex Program & Risk Management

MVP reviews, assesses, and recommends changes to roadmaps and project plans, staffing plans, identification and management of risks, test plans, budgets and training.

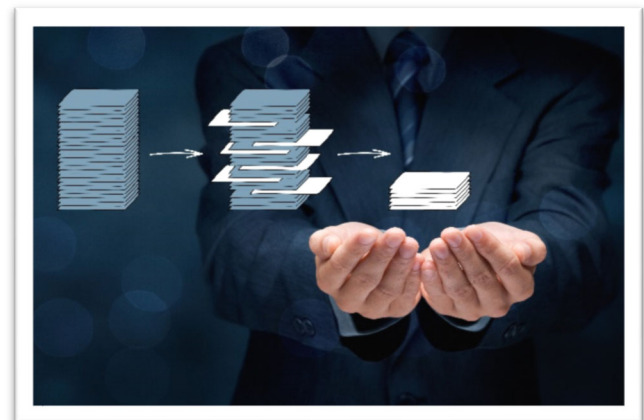

We provide an overall framework for governing programs and risks to reduce cost and deploy systems that meet the program business case.

Our Complex Program & Risk Management services define the PMO and overall program structure.

### Conversion Design & Support

MVP's conversion services provide expert data conversion leadership to guide the implementation team through the various stages of converting data from existing legacy system(s) into COTS applications.

We leverage years of experience assisting our clients to make the right decisions around data conversion strategy, tool selection, design, and implementation options in converting, transforming and rationalizing legacy data.

### Program Health Checks

In addition to managing your platform consolidation program, MVP leverages skills for competencies such as product setup, testing, data conversion and business process change management.

MVP can design the sequence and dependencies involved with platform consolidation to accelerate benefits realization while minimizing risk and cost.
